

Why Work With Me

Lower rates, faster delivery — with proof you can check

As a student building a track record, I intentionally price below the wider freelance market and turn work around faster — while keeping the same quality you'd expect from an experienced freelancer. This brochure shows exactly how my rates and delivery times compare, plus real sample projects you can open and review before you hire.

Lower Rates

Priced below typical freelance-platform rates for similar work, so you get more for your budget.

Faster Delivery

Small team of one, no client queue — most single tasks are turned around in days, not weeks.

Verifiable Work

Every claim backed by a GitHub portfolio and sample projects you can open and inspect yourself.

What's Inside This Brochure

Section	What you'll see
Rate Comparison	My pricing side-by-side with sample rates observed on other freelancing platforms.
Speed Comparison	My typical turnaround vs. typical market turnaround, mode by mode.
Project Details	Sample projects you can view and download to judge the quality of the work yourself.

Important note: figures for “other freelancing platforms” throughout this brochure are sample / illustrative rates, gathered as general market observations from platforms such as Upwork, Fiverr and similar freelance marketplaces — not quotes from any specific freelancer or listing. My own rates shown for comparison are also sample figures for the same reason given in the pricing menu: the actual price for any job can be higher or lower depending on the size, complexity and urgency of that particular project. Please treat every number here as a starting point for discussion, not a fixed quote.

Rate Comparison

My rates vs. sample rates from other freelancing platforms

The table below lines up my rates against sample rates seen on other freelancing platforms for comparable work. Ranges are approximate and vary by project — see the note at the end of this page.

Hourly Rates

Service	My Rate	Sample Market Rate*	My Saving
Data Cleaning / ML Work	₹300–500/hr	₹800–2,000/hr	up to ~70% less
Python / DS Tutoring	₹400–600/hr	₹800–1,500/hr	up to ~55% less
Dashboards / Automation	₹300–500/hr	₹800–1,800/hr	up to ~70% less

Package / Project Rates

Service	My Package	Sample Market Package*	My Saving
Data Cleaning + ML Model + Report	₹7,000–15,000	₹15,000–30,000	up to ~50% less
6–8 Session Tutoring Course	₹2,500–4,000	₹5,000–9,000	up to ~55% less
Business Dashboard + 1mo Support	₹5,000–8,000	₹10,000–25,000	up to ~60% less

** Sample market rates are approximate ranges observed generally on freelance platforms such as Upwork, Fiverr and similar marketplaces for comparable intermediate-level data science, ML and tutoring work in India — not a quote from any specific person or listing, and not guaranteed to match what you'll see if you check yourself. Savings percentages are illustrative, calculated against the low end of each sample range. My own rates are equally a sample: the final price for your project depends on data size, complexity, timeline and scope, and can be higher or lower than shown here — always confirmed with a fixed quote before work starts.*

Speed Comparison

How my turnaround compares to typical market delivery times

Turnaround matters as much as price. Freelance platforms often mean queues, time-zone gaps and juggling many clients at once. Working with me directly usually means a faster start and a faster finish.

Working Mode	My Typical Turnaround	Sample Market Turnaround*
Single Task	2-5 days	5-10 days
Standard Package	1-2 weeks	2-4 weeks
Hourly Booking	Same week, often within 48 hrs	Booked around freelancer's queue, 3-7 days
Monthly Project (paid weekly)	Weekly milestones, checked in every 7 days	Milestones often unclear, updates monthly

Why It's Faster

No agency layer	You talk to me directly — no account manager or hand-offs slowing things down.
One client at a time per slot	Work is scheduled in focused blocks, not spread thin across dozens of gigs.
Clear scope upfront	A fixed quote and defined deliverable before I start means no back-and-forth mid-project.

* Sample market turnaround times are approximate, general observations about typical delivery on freelance marketplaces — not a measurement of any specific freelancer. Actual turnaround for any job, mine included, depends on the size and complexity of that project and is confirmed at the time of quoting.

Project Details

Sample projects you can view and download

Don't just take the pricing on faith — here are sample projects from my portfolio you can open, read, and download right now to judge the quality of the work for yourself.

Sample Project — Weather Prediction Model

End-to-end ML pipeline: data cleaning, feature engineering, and a regression model predicting weather outcomes from historical data, with an evaluation write-up.

[View & download on GitHub →](#)

Sample Project — Image Classification

A classification pipeline built with scikit-learn / TensorFlow, covering preprocessing, model training, and accuracy evaluation on a labelled image dataset.

[View & download on GitHub →](#)

Sample Project — Data Cleaning & EDA Notebook

A messy raw dataset turned into an analysis-ready one, with a full exploratory data analysis notebook and a short insights summary — the same format delivered to paying clients.

[View & download on GitHub →](#)

All three are real, working notebooks and code — open them, run them, or download the files directly from the GitHub link above. This is exactly the standard of work delivered on paid projects, single task or otherwise.
